2

Is it always, sometimes or never true that a square number has an even number of factors? Circle the correct answer.

Always Sometimes **Never**

Explain.

A square number always has an odd number of factors as the square root is multiplied by itself. This gives one additional factor to the other factor pairs, making it an odd number.

1

Each side of the square has a total of 576. Write in the missing values in the circles below.

2

The numbers in this sequence increase by 3 each time.

2, 5, 8, 11, 14

The sequence continues in the same way. Will the number 333 be in the sequence?

Circle Yes or No Explain how you know.

Because the numbers in the sequence are all 1 less than a multiple of 3. As 333 is a multiple of 3, it will never be in the sequence.
